Education

School of Engineering and Technology - Nagaland University

July 2019 – May 2023

B.Tech in Computer Science & Engineering (CSE)

Dimapur, Nagaland

Ajmal College of Arts, Commerce & Science

2016 – 2018

Higher Secondary (11&12) - Science

Hojai, Assam

Relevant Coursework

MERN Stack Development

2024

JSpiders, Marathahalli

Experience

LeviSoft Technologies Pvt. Ltd.

Feb 2025 – Feb 2026

Associate Software Engineer

Tin Factory, Bangalore

- Contributed to a US-based OTT streaming platform using React.js and React Native, developing scalable web and mobile features including MasterClass, Series, Music, and content discovery modules.
- Implemented core mobile functionalities such as ad integration, profile and device management, device detection with UUID and metadata, and seamless REST API integration for secure, cross-platform content delivery.

Projects

PathPlus – Christian OTT Streaming Platform (US Based) | React.js, React Native

Feb 2025 – Feb 2026

- Built a high-performance OTT platform for web and mobile.
- Developed MasterClass, Series, and Music modules with custom media players and structured content management.
- Designed content detail screens with trailers, metadata, and recommendations.
- Integrated mobile ads, profile management, secure device registration, and UUID-based device tracking.

SyncUp – AI-Powered Job Platform | Next.js, Node.js, AI, AWS — [Live Demo](#) 

Personal Project - 2026

- Built a full-stack AI job platform using Next.js (App Router, TypeScript, Tailwind CSS) with a Node.js + Express.js RESTful backend and Neon PostgreSQL database.
- Integrated Groq API (llama-3.3-70b-versatile) as the AI matching engine with RabbitMQ for async PDF parsing, Upstash Redis for sub-millisecond job listing caching, and Socket.IO for real-time match notifications.
- Implemented secure file handling via AWS S3 with 1-hour presigned URLs and JWT-based authentication.
- Deployed frontend on Vercel and backend on AWS EC2 with PM2 process management, Nginx reverse proxy, and Cloudflare Tunnel to resolve HTTPS/HTTP mixed content issues.

Real-Time Chat Application | MERN, Next.js, Microservices, AWS — [Live Demo](#) 

Personal Project - 2026

- Built a scalable real-time chat app using MERN and Next.js with microservices architecture.
- Implemented Socket.IO, RabbitMQ, Redis caching, and OTP-based authentication.
- Dockerized services and deployed on AWS with secure endpoints via Cloudflare Tunnel and Ngrok.
- Hosted frontend on Vercel for production deployment.

Technical Skills

Frontend: HTML, CSS, JavaScript, TypeScript, React.js, Next.js, React Native, Material UI, Tailwind CSS

Backend: Node.js, Express.js, Microservices Architecture, RESTful APIs, GraphQL, WebSockets

Authentication & Security: JWT, 2FA, OAuth 2.0, RBAC

Messaging & Caching: Redis, RabbitMQ, Kafka (KRaft Mode)

Databases & Infrastructure: MongoDB, MongoDB Atlas, PostgreSQL, AWS (EC2, S3), Docker, Kubernetes

Tools: Git, GitHub, Postman
